CHEMISTRY TRIP

DR. DUDLEY INTRODUCES THE PRACTICAL SIDE TO STUDENTS

The Howe ice plant was the object of the industrial chemistry's first trip. It has always been the custom of Dr. Dudley to carry this class to the various manufacturing plants in the city to show them the practical side of the work.

The Howe Ice Company kindly granted the class the privilege of inspecting their plant last Monday, and with elaborate explanations by Dr. Dudley the mechanism was set forth so that each member went away with good ideas concerning this line of industry, cordially thanking the company for their kindness.

The next trip, while not definitely determined upon, will very probably be made to one of the soap factories.
